NEVERENDING GLORY

Jan Plecháč and Henry Wielgus sketched the shape of the Lasvit Neverending Glory chandeliers by rotating a silhouette around its own axis. In the individual silhouettes, it is possible to recognize iconic chandeliers from five of the world's most eminent concert halls and theatres; La Scala in Milan, Palais Garnier in Paris, the Metropolitan Opera in New York, the Czech Republic's Estates Theater in Prague, and the Bolshoi Theater in Moscow.

Designed by Jan Plecháč & Henry Wielgus

Certainly not from the Stone Age but closer to the fictional Kryptonite, Crystal Rock appears in the cave of the future as an ambassador to the fusion of nature and man, light and reflection, transparency and mass. All these characteristics are gathered within a perfectly cut, yet roughly sculpted contemporary silex. Its multiple reflections and deflections fascinate onlookers during the day and even more at night, when lighted.

The Frozen collection was inspired by the transformation of water into ice. Velčovský allows the glass to spill over a metal form and seeks advantage in its natural properties. Each piece traces a unique record of the process, becoming an original. The author found inspiration among pieces of ice created by nature and applied that element of randomness in nature to his craft in the context of glassmaking.

Rene Roubíček's chandelier designed for Lasvit named by its author "And Why Not!" refers to his lifelong experimentation and searching for compositions and forms incarnated in glass. The chandelier's emotionally intense sculptural form resembles a flash and is an evolution of Roubíček's core designs based on dynamic abstraction. Light gliding on large, smoothly polished surfaces while absorbed by the mass of the glass creates a unique atmosphere.

Designed by René Roubíček

YAKISUGI

The renowned Japanese architect drew his inspiration from a technique for preserving construction timber by charring its surface, known in Japan as Shou-Sugi-Ban or Yakisugi. This ancient technique uses charring wood as means to preserve it without the need of painting or sealing, an aspect leading to the current revival of this technique in eco-friendly architecture. Adapting this process to the centuries-old glass craft technique enabled a contemporary design that is unique for every single piece of hand-blown glass.

Duna was inspired by the coherent yet abstract logic of dune formations that defy traditional Cartesian geometries. Its design concept is realized in a three dimensional, asymmetrical, pair of intersecting glass forms. The striated surface of the crystal glass produces ever-changing effects of reflection and refraction. Narrowly directed light sources beam light through the mass of glass into the entire glass element, highlighting its geometry.

Designed by Zaha Hadid Design

CIPHER

The Cipher collection is a juxtaposition of heritage techniques and contemporary form. Its delicate hand-blown crystal cylindrical pieces are cut with clean, clear lines. Light emits only from connection points and the sources are ingeniously hidden to soften the overall effect. With components arranged in series and joined by polished champagne-gold finished connections, Cipher's overall linear form creates a poetic visual rhythm. As a system, the Cipher collection is extremely flexible and customizable, with limitless possible configurations for private residences and bespoke installations projects.

SPIN

Small and large transparent pendants multiplied. Spin light's expression of dynamics is based on a simple rotational form resembling a child's toy known as the spinning top or the silhouettes of whirling dervishes. It gives the lights a basic graphic impression. Clear transparent airy lamps with a touch of color on top are powered by small LED-efficient discs which highlight strong silhouettes and let them float freely in the space as empty volumes.

MOULDS

Moulds is a collection of suspended lights, showcasing Czech crystal at its most resilient and lively form. The series captures a specific moment when molten glass resists its expected shape and freely escapes from the mould as a random, amorphous bubble. The energizing effect of this series arises from the contrast of materials, using the traditional craft techniques of blowing crystal glass into a beech form. Integrated LED light sources were set directly within the charred form, creating an impression that the heat and energy of the glassmaker's kiln remained inside, in historic reference to the art of Czech glassmakers.

PRESS

One of influences which shaped modern Japanese design was the Mingei (Folk Crafts) Movement. It emphasised the pursuit of practical beauty as well as the universal appeal of everyday craftwork design. Still present in contemporary Japanese design, these approaches affected also the design of Press Lamp. Here glass tubes are pressed as though they have been pinched, and the light source is fitted into the narrowed space. It does not rely on a metal form, the compression of the glass produces a soft, organic form and imbues each lamp with a singular appearance.

DROPLETS

Inspired by nature, emotion and a unique frozen moment, this lighting sculpture reminds us of our fascination with water. It captures the perfection of the natural movement when water collects into a drop. The entire composition, as well as the individual elements and their shapes, play with the magic of water, air and gravity. The harmonious density gradient highlights this instant, providing sensations of depth and motion.

Color / Clear — Gold or Silver
Surface Finish of Metal Parts /
Super Polished Stainless Steel

Lasvit is a creative hub of glassmaking talents, fresh ideas, and daring designs. This young, progressive Czech glassmaking and design company inspires the world with its breathtaking custom-made installations exhibited all over the world, as well as with their unique lighting and glassware collections made from hand-blown glass. This original approach captivated design professionals and made Lasvit an award-winning company. In 2018 Lasvit won the design “Oscar” at Salone del Mobile.

The founder of Lasvit, Leon Jakimič, steers the company with the utmost respect for the Czech glassmaking tradition, but also with a boundless optimism for modern technologies and cutting-edge design.

In past years, Lasvit has attracted many renowned designers and artists who wanted to collaborate with an unconventional Czech company. In cooperation with Lasvit, many stars such as the Campana Brothers, Kengo Kuma, Yabu Pushelberg, Nendo or Ross Lovegrove, have created some of their most unforgettable glass collections. Ever since 2007, Lasvit has been on a mission: to bring beauty, happiness, and a piece of the Bohemian soul to clients worldwide, and thus change the world for the better. Let Lasvit in, let the changes begin.
